Education

The University of Adelaide — Adelaide, SA
Masters of Artificial Intelligence and Machine Learning – GPA: 6.67/7 — *Sep 2025 – Present*

The University of Melbourne — Melbourne, VIC
Bachelor of Science - Computing and Software Systems Major – WAM: 75.6 — *Jul 2022 – Jun 2025*

Experience

Software Developer and Computer Vision Engineer — Oct 2025 – Dec 2025
Legend Sports — *Adelaide, SA*

- Built a spatial sound engine driven by player and ball telemetry, using ffmpeg-python for timestamp alignment, frame demuxing, and dynamic mixing, achieving sub 200 ms sync latency
- Developed a Next.js event-tagging interface with player stats, timeline scrubbing, and hotkeys, reaching annotation throughput of 180 events/hour
- Co-developed a YOLO-based detection model, including Roboflow dataset versioning, augmentations, and hyperparameter sweeps, improving mAP@0.5 by around 10 points

Web Developer and Data Engineer Intern — Nov 2023 – Feb 2024
TCOM Corporation — *Ho Chi Minh City, Vietnam*

- Sought out and patched 20 bugs/day for a HR management website for a Japan-based company
- Collaborated with five seniors to develop an e-commerce site, contributing over 15% codebase
- Integrated GraphQL APIs into the Next.js front-end and optimised query schemas and indexing, reducing data transfer and fetch latency by 20%

Projects

Agent Skills Registry | *Vite/React, TailwindCSS, .NET Core, SQLite, Docker* — Dec 2025 – Feb 2026

- Engineered a full-stack version control system for AI agent prompts, implementing a GitHub-style diffing engine and rollback that reduced manual version tracking effort by 90% through automated line-level and word-level change detection
- Optimized a stateless JWT authentication system, achieving zero-latency metadata extraction while ensuring 100% server-side validation for all user input
- Designed a scalable RESTful architecture using Entity Framework Core, integrating PBKDF2 hashing and request throttling to mitigate XSS, SQLi, and DoS risks, maintaining sub-100ms API response times while managing libraries of 50+ versioned skills

Algorithms In Action | *JavaScript, CSS, HTML* — Jul 2024 – Nov 2024

- Contributed open-source to a front-end heavy web application that visualizes different algorithms, such as Hashing, Sorting, etc., to support students and educators
- Conducted weekly stand-ups, security and ethicality reports, final product presentation, and followed the Agile software development methodologies
- Improved overall user experience, implemented 3 new algorithms and visuals, and introduced 2 new libraries that reduced code cluttering by 18%

BioNix | *Nix, nixpkgs* — Jul 2024 – Nov 2024

- Strengthened understanding of open source norms, refined over a dozen documentations around Nix, BioNix, Kraken2, TRF, and RepeatMasker
- Committed open source, wrapping 3 bioinformatics software previously unavailable in nixpkgs
- Wrote expressions to execute 4-7 individual processing stages and conduct an assessment on each stage in isolation

Technical Skills

Languages: C, Java, JavaScript, Python, TypeScript, Nix, C#, C++
Frameworks: React, Node.js, Next.js, Vue.js, Angular, Express.js, TailwindCSS
Developer Tools: Git, Docker, MySQL, Confluence, Trello, Vercel, Figma, Roboflow, VS Code, MATLAB, MongoDB, IntelliJ, SourceTree, Pinecone, ChromaDB, Streamlit, CloudFlare
